Concrete admixture water reducer

Introduction

Concrete admixture water reducer is a new generation of environment-friendly polycarboxylic acid superplasticizer developed and produced by our company.

Advantages/Characteristics:

The new generation of polycarboxylic acid superplasticizer has overcome some disadvantages of traditional superplasticizer, such as low content, good slump performance, low shrinkage of concrete, strong modulability in molecular structure, great potential for high performance, and no use of formaldehyde in the production process.

Application

It is suitable for precast and cast-in-place concrete, reinforced concrete and prestressed concrete of high speed railway, special passenger line, industrial and civil construction, road, bridge, port, wharf and airport. It is especially suitable for the
