Polycarboxylic acid water reducer

Introduction:

Polycarboxylic acid water reducer is one of the most advanced and efficient water reducer, is a new admixture for high strength and green performance of modern concrete, Its main characteristics are: low content, high water reduction rate, low slump loss and good cement adaptability.

Performance:

- 1.Appearance is white or light yellow powder,non - toxic, non - smelly, non - flammable
- 2.High water reduction rate (mortar with higher density and strength)
- 3.Excellent mobility (reduced vibration and compaction)
- 4.Increase early intensity development
- 5.Good shrinkage resistance and excellent creep behavior of mortar
- 6.Due to fast adsorption, the mixing time is reduced and the construction efficiency is higher
- 7.Long-term stability, easy storage, mixing performance can still be long-term stability

8. Polycarboxylic acid water reducer has little effect on the hydration of mortar, does not reduce the activity of cementing material and promotes hydration to some extent

9. Good adaptability in a wide range of PH values

10. Polycarboxylic acid high performance water reducer is compatible with other additives such as citric acid and tartaric acid

11. Free of free formaldehyde (unlike SNF/SMF) and ammonia

Dosage:

The dosage varies with the usage and the composition of the dry mixture. Please confirm the appropriate dosage in advance under specific conditions. Please contact our technical service department for more support and help.
