cement polycarboxylate superplasticizer

cement polycarboxylate superplasticizer is a new generation superplasticizer based on modified polycarboxylate particularly recommended for ready mixed concrete and civil engineering construction. Its particular configuration allows its delayed adsorption onto the cement particles and disperses them efficiently. Typical application and advantages of cement polycarboxylate superplasticizer:

- 1.Strong plasticizing effect, improved initial processing performance, easier placement, faster strength development.
- 2.High performance concrete can be transported to the construction site at any time.
- 3.cement polycarboxylate superplasticizer can be used alone, but also with other admixtures into pumping concrete, ready-mixed concrete and other special concrete.
